SHADA

The shada are of nature, and as such, they claim to have dominion over all of Ankar. The race of elementals has unlocked terrifying power by combining its members into supercharged soldiers of natural energy, taking advantage of Ankar's environment in their no-holds-barred war for dominance.

The shada are a terrain-focused faction, and expert players will find hidden strategies by examining the geography of every game they play. Be mindful of where your minions can move and what powers you can unlock by placing spires on advantageous positions.

Chips from this expansion have this symbol on them so that you can easily separate them.

SPLICING GENERATOR

1 – Source Anchor

When one of your faction minions ends its turn on an unoccupied Source well, place a health chip on it (as a reminder). On your next turn, remove the health chip. That unit may move as normal or skip its movement that turn.

2 – Elemental Forge

In the Prep Phase, after selecting minions, you may trigger a fusion between two of your selected basic shada minions.

3 – Bioweapon

Gain the bioweapon die.

Bioweapon Die: After triggering a fusion in the Onslaught Phase and returning both minions to your barracks, you may roll this die and apply the result. If you choose to do so, you do not place a promoted minion.

Remove the bottom two upgrades from the closest opposing spire to the Source well where the fusion occurred.

Deal 2 damage to all opposing units within three hexes of the Source well where the fusion occurred.

Deal 2 damage to the closest opposing fortress gate to the Source well where the fusion occurred.

GATEPORT

1 – Ankar Commune

As your market purchase during the Market Phase, you may put a revealed landmark minion into your barracks by paying its Source reward. If it does not have a Source reward, pay 6 Source instead. This minion can be deployed for 0 CP.

2 – Reprioritize

On your turn during the Market Phase, you may discard a minion from the market options by paying its Source cost. You may then set aside a minion from your barracks with CP equal to or less than the Source you paid and select it for deployment this wave for 0 CP.

3 – Ankar Command

When you purchase an earthscape, you may search the entire earthscape stack and select one to gain. Then, remove this advancement.

ELEMENTAL FULCRUM

1 – Natural Architecture

Wind shear and pillar of fire spires can now be constructed.

2 – Weather Absorption

Gain the weather absorption die.

Weather Absorption Die: At the start of each Onslaught Phase, you may roll this die and place it on a spire you control. If it is already applied to a spire, you may choose to remove and roll it. The spire is considered to be on a hex with the rolled terrain type(s) in addition to its own. When the spire is defeated, return this die to your fortress.

3 – Weather Control

Rather than rolling the weather absorption die, you may set it to the result of your choice.

4 – Fallout Weaponizer

Pillar of fire spires gain the talent Air Defense.

SOURCE DISTILLERY

1 – Source Fracking

When you defeat an opposing unit that is on or adjacent to a Source well, gain +1 Source.

2 – Fusion Turbines

After resolving a fusion, gain Source equal to the Source reward of the fused minion with the lower reward.

3 – Camouflaged Recon

At the start of each Prep Phase, gain +1 CP for each different terrain type you have a spire on.

PURIFICATION COMPOUND

1 – Reabsorption

After a shada minion attacks, if it is adjacent to a shada-controlled spire that is on a hex matching the minion's terrain allowance, the minion may be placed under the spire as a spire upgrade, ignoring upgrade capacity. This upgrade functions differently depending on the spire's element. Water / Stone = . Wind = . Fire = . When this upgrade would be returned to the supply, the minion chip is returned to your barracks.

2 – Catalytic Armory

When a shada minion attacks, if it is adjacent to a shada-controlled spire on a hex matching the minion's terrain allowance, the minion's attack deals +1 damage.

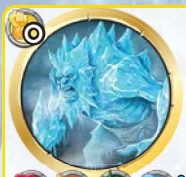
NATURE GARRISON

1 – Jagged Edge

When your fortress retaliates, you may spend Source equal to the CP cost of a minion in your barracks. The retaliation damage of the fortress is equal to that minion's attack stat for that retaliation. Then, set aside the minion you selected until after the following Prep Phase. It is unavailable for selection while set aside.

2 – Balanced Foundation

Your maximum fortress gate health is now 15. When this advancement is purchased, your fortress gate may immediately recover 1 health for each different terrain type you have a spire on.



RIME

 # Range – This unit attacks and retaliates from up to # hexes away.

Hail – While an opposing faction unit with the talent Flying is in this unit's range, the Flying talent is ignored. Any change regarding whether Flying is ignored does not happen until after the opposing faction unit finishes its movement.

TEMPEST

 # Range – This unit attacks and retaliates from up to # hexes away.

Air Defense – This unit or spire can attack units with Flying.

Twister – After this unit's movement, you may select one revealed or unrevealed landmark chip within three hexes of this unit and place it on an unoccupied non-path hex adjacent to this unit.

FISSION

Radiate – Before this unit's movement, it may transfer 1 health or 1 upgrade from under its chip to an adjacent unit, ignoring health or upgrade restrictions. It may repeat this once for each other adjacent unit.

Source Aura – After this unit's movement, it may deal 1 damage to all adjacent opposing spires and units.

WATER

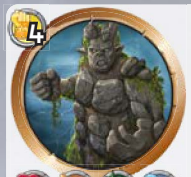
Submerge – If this unit starts its movement on a water hex, it may recover 1 health.

Waterwalker – While this unit is on a water hex, spires cannot attack it.

WIND

Air Defense – This unit or spire can attack units with Flying.

Gust – If this unit starts its movement on a grassland hex, you may increase its movement stat by 1 for this turn.

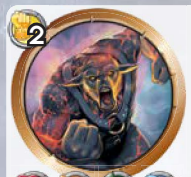


STONE

 # Range – This unit attacks and retaliates from up to # hexes away.

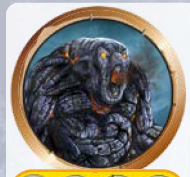
Air Defense – This unit or spire can attack units with Flying.

Rockslide – After this unit's movement, if it is on a mountain hex, it may remove the bottom spire upgrade from any spires on or adjacent to the group of mountain hexes it is on.



FIRE

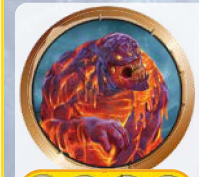
Blaze – Once during this unit's movement, after it moves onto a forest hex, it may deal 1 damage to an adjacent unit.



ASH

Evasive – When this unit is attacked by a unit with Range, reduce the damage dealt to 1.

Disperse – At the end of this unit's movement, it may place itself onto a valid hex up to 2 hexes away, so long as that hex is adjacent to an opposing faction minion. This unit then deals 2 damage to that unit and 1 damage to itself.



LAVA

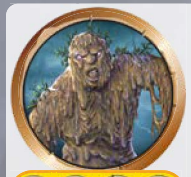
Eruption – At the end of this unit's movement, you may spend 3 Source to deal 3 damage to all adjacent units, spires, and fortress gates. Then, return this minion to your barracks.

Lahar – When an opposing unit without Flying moves onto a hex adjacent to this unit, this unit deals the opposing unit 1 damage.

DUST

Camouflage – Units and spires must be adjacent to this unit or spire in order to attack it.

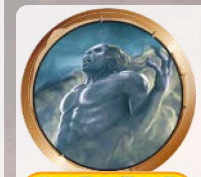
Weak Point – Instead of attacking, this unit may remove the top two upgrades from an adjacent opposing spire.



MUD

Armored – When this unit is attacked, reduce damage by 1.

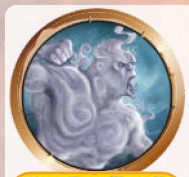
Mire – When an opposing unit moves onto a hex adjacent to this unit, its movement immediately ends.



HURRICANE

Flying – *Ungrouped only.* This unit can only be attacked by units or spires with Air Defense or Flying. Other units may displace this unit.

Downpour – During the Spires Fire step, if this unit is targetable by an opposing spire, all 2s rolled by that spire are set to blanks before being resolved, even if this unit is not the spire's target.



STEAM

 # Range – This unit attacks and retaliates from up to # hexes away.

Air Defense – This unit or spire can attack units with Flying.

WATER TOWER

Refresh – If this spire is on a water hex, your units recover 1 health when they move into a hex adjacent to this spire (once per unit per turn).

WIND SHEAR

Air Defense – This unit or spire can attack units with Flying.

Lift – If this spire is on a grassland hex, all shada minions within this spire's range gain the talent Flying.

STONE SPIRE

Quake – If this spire is on a mountain hex, before its attack during the Spires Fire step, you may remove the bottom upgrade from an opposing spire in range, remove 1 health from a landmark in range, or remove a facedown landmark in range from play (the facedown landmark is not considered defeated).

PILLAR OF FIRE

Inferno – If this spire is on a forest hex, after it attacks, it gains a upgrade, if able.

SHADA ADDITIONAL RULES

MINION PROMOTION

The shada promote their minions through fusions. After a basic shada minion's movement, you may place it on an adjacent Source well, ignoring terrain restrictions. If it is grouped, it leaves its group. It cannot place itself back on the same Source well it occupied before its movement. After any other basic shada minion's movement, if it is adjacent to an ungrouped shada minion on a Source well, the two may trigger a fusion by spending Source equal to the combined difference between the units' current health and their health stats. When a fusion occurs, both shada minions are returned to your barracks, and a promoted minion matching the fusion pairing is deployed to the Source well. If a chip with the fusion pairing is not available (even after the two minions would be returned to your barracks), the fusion does not take place, and both minions remain in play. Promoted minions may not perform a fusion.

SPIRES

Shada spires all have talents that boost the efficacy of the spire based on the terrain type they are constructed on.

MINIONS

All shada minions have a specific terrain allowance marked by the circle icon (shown above) on their chip. Unlike normal terrain allowance, this allows them to treat that terrain type as path hexes, but no others (example: lets that unit walk on water hexes, but not grasslands, forests, or mountains).

FUSIONS

Fire + Wind	Ash
Stone + Wind	Dust
Water + Wind	Hurricane
Fire + Stone	Lava
Water + Stone	Mud
Fire + Water	Steam
